

REFLECTION

Student:Sippanon Sornkunkaew.....65340500076.....

Advisor: Mr. Bawornsak Sakulkueakulsuk.....

Topic: Motor Imagery BCI for Virtual Hand Control

What have you done right in the previous phase?

1. Find the way to do signal processing from online dataset.
2. Learn how to interpret classification results.

What could you have done better?

1. Know how to interpret classification results and how all processing works.

What do you aim to achieve next?

1. Finish the project (report + process plan + presentation)
2. Every step must stick to subject's expectation (criteria) or exceed the expectation (if possible).

What are changes in the plan?

1. Nothing.

How do you feel toward this work right now?

Anxiety. I have been feeling like I am lost. There is no more inspiration but feel like I must finish this project so I will not be judge by the others again. Time is running out and here I am at the starting point. I found out I lack of continuous too which it is a bad habit.

How has your advisor treats you (academics, research skills, personal support, ...)?

My advisor always did an excellent job! He shows me new perspective. I really appreciate him.
