

REFLECTION

Student:Sippanon Sornkunkaew.....65340500076.....

Advisor: Mr. Bawornsak Sakulkueakulsuk.....

Topic: Motor Imagery BCI for Virtual Hand Control

What have you done right in the previous phase?

1. Find the way to create a proper experimental design.
2. Find dataset and learn how to preprocessing signals and feature extraction.

What could you have done better?

1. Creating experimental design and study signals processing must be faster.
2. I should have followed my Learning plan that I had told you about, like I promised to do something according to the plan, but I couldn't achieved it.

What do you aim to achieve next?

1. A proper experimental design and start the experiment.
2. Every step must stick to subject's expectation (criteria) or exceed the expectation (if possible).

What are changes in the plan?

1. Nothing. Just suggestion myself to act faster because there will be more obstacles.

How do you feel toward this work right now?

Challenging because I think I must achieve this individual project.

How has your advisor treats you (academics, research skills, personal support, ...)?

My advisor always did an excellent job! He shows me new perspective which I should manage both experimental design and learn signal processing not let some process behind.
